EDUCATION

Columbia University

New York, NY

Master of Science, Computer Science, Thesis Track (GPA: 4.13)

May 2027

- Agentic systems for human-AI alignment through design probes, spanning a conversationally malleable productivity interface and visual C4/git diffs of how coding agents modify a codebase. (PI: [Lydia Chilton](#))
- Building an on-device accessibility service that helps screen-reader users gauge link safety and resist phishing, advancing inclusive navigation for blind and low-vision users as part of the CEAL lab. (PI: [Brian Smith](#))
- Co-led DPSEntry, a multi-agent VLM auditor that detects deceptive UI flows across screen sequences rather than single frames, combining VLM-based screen reading with rule-based checks to flag dark patterns. (PI: [Zhuo Zhang](#))

University of Maryland

College Park, MD

Bachelor of Science, Computer Science (GPA: 3.8)

May 2023

- Dean's List, all semesters. Minor in Business Analytics, Robert H. Smith School of Business
- Teaching Assistant: CS 250 (Discrete Structures); led sessions for 40+ students and supported course tooling.

EXPERIENCE

Software Engineer, Mobile Platforms

December 2023 – January 2026

Amazon

Seattle, WA

- Modernized Kindle's Android and Fire Tablet platform (1M+ LOC) using MVVM architecture with Kotlin and Jetpack Compose, to increase engagement on large-form-factor devices by 2% for over 10 million readers.
- Spearheaded app stability and build reliability by fixing 25+ crashes/freezes and triaging 200+ issues via stack-trace analysis, instrumenting client/server SLIs in CloudWatch, and adding static-analysis gates in a 50+ dev-org.
- Helped design, build and scale a cross-platform design system for Kindle's native mobile applications from early component audits onward, becoming its top contributor with 10+ accessible components and tokens. Used AI-assisted workflows to reduce integration time, cut design drift by 70%, and save 100+ engineering weeks.
- Championed accessibility, advising on semantics, focus, and contrast in early Figma reviews. Resolved 90 tickets, added integration tests, and reviewed 200+ PRs to ensure ARIA parity and compliance beyond WCAG 2.2 AA.

Software Engineer, Full-stack

July 2023 – November 2023

Programmers.io

Remote

- Developed 8 features in an ASP.NET Core MVC app (folder management, audit tracking, role-based auth) plus 5 React/Chart.js dashboards, cutting negative reviews 40% and project costs 10%.

Engineering Intern, Infrastructure Solutions Group

May 2021 – Sep 2021

Dell Technologies

Hopkinton, MA

- Built an automated integration with scheduled sync that pulled live Jira data into Confluence via Atlassian REST APIs and JQL, replacing manual status decks with real-time dashboards across a 40+ stakeholder portfolio.
- Engineered telemetry aggregation across 700+ programs in seven Infrastructure Solutions Group (ISG) business units, automating collection and consolidation to power executive dashboards for planning and OKR tracking.

LEADERSHIP

Global Accessibility Awareness Month (GAAM) Conference, *Speaker*

May 2025

- Presented to 60+ people, sharing gradual migration strategies for large-scale legacy platforms adopting newer frameworks, and lessons learned building design systems to scale accessibility and mitigate high-severity issues.

TECHNICAL SKILLS

Languages: Java, Kotlin, Swift, Python, SQL, JavaScript

Frameworks: ASP.NET, React, JUnit 5, TestNG, Selenium, Robolectric, Jetpack Compose, Material Design

Developer Tools: Git, Claude, Amazon Q, Docker, Firebase, Jenkins, Gradle, Sublime, Visual Studio, IntelliJ

Cloud Platforms: Amazon Web Services (AWS): EC2, S3, CloudWatch, IAM; Google Cloud Platform (GCP)
